LANGUAGES AND TECHNOLOGIES

• JavaScript	• Bootstrap	• JSON	• Git
• HTML	• Tailwind CSS	• Figma	• GitHub
• CSS	• Drupal	• Adobe Photoshop	• REST API
• JavaScript	• Node.js	• Adobe XD	• Firebase

PROJECTS

My Portfolio
Technologies used: React, Next.js, CSS, Styled-Components, cPanel

- Developed single-page application showcasing my projects, technologies, and personal accomplishments.
- Implemented the use of styled-components to help keep the concerns of styling and element architecture separated as well as make components more readable during development.
- Incorporated React using its Higher-Order Component pattern for extreme reusability and customization within the component-hierarchy.
- Employed Next.js to enable server-side rendering functionality, improving performance and allowing for pages to load much quicker.
- Successfully deployed app on custom domain using cPanel hosting.

Instagram Clone
Technologies used: React, Firebase, Styled-Components, CSS, Material-UI

- Developed app using React with Firebase serving as backend. CRUD functional with the ability to post and comment on user's photos.
- Utilized Firebase's Firestore to contain and query all backend data to serve as a NoSQL document database.
- Leveraging Firestore also allows the ability to authenticate app users via email and password using Google's security measures, as well as the create account process.

Tibles Website
Technologies used: HTML, CSS, JavaScript, Figma

- Led the front-end development in creating the new website for Tibles Inc. - an NFT company based in New York City.
- Leveraged the use of media queries for all device sizes to ensure site responsiveness, allowing for a more modular front-end experience.
- Implemented the use of JavaScript for support with Document Object Model manipulations.
- Orchestrated standup and round table meetings with design team to ensure assets and wireframes were routinely updated and maintained.
- Responsible for all of company's GitHub site branches, as well as pushing code to master production.

EDUCATION

Austin Community College Software Coding Bootcamp   **2020 - 2021**

- Successfully completed over 240 hours of classroom training in a 24-week course, as well as 200+ hours of take homes and project time.

WORK EXPERIENCE

Frontend Web Developer   **2022 - Present**
Apple Inc.

- Develop and maintain accessible, responsive, functional and rich Apple-quality user experiences for multiple internal Apple sites to allow recruiters to easily access information needed to perform their daily tasks.
- Responsible for managing internal recruiting projects, communication, training, and developing websites for Apple recruiting and beyond.
- Build and publish carefully crafted web pages using front-end technologies, including HTML5, CSS3, and JavaScript often via the use of Drupal.
- Refactored components of RecruitingWeb to align more with Apple and Apple's accessibility standards.
- Member of the Frontend Mentoring Program at Apple.
- Worked closely with content managers in the development and launch of Apple's intern site for 2022.

Frontend Developer - Consultant   **2021 - Present**
Tibles Inc.

- Built websites designed for Tibles Inc for the selling and trading of the official Dr. Seuss and OneShots NFT collectibles.
- Fully developed and co-designed company's websites via the use of Figma, HTML and CSS and leveraged the use of heavy communication with the Tibles design team as well as occasionally attending their meetings to ensure assets were kept up-to-date and met company compliance standards.
- Involving heavy communication with the Tibles design team to ensure assets were kept up-to-date and met company compliance.
- Developed all apps using JavaScript, HTML and CSS. Designed to be responsive for all device sizes by implementing the use of media queries.
- Developed landing page for Tibles Inc to showcase their new NFT private beta "OneShots".

Apple Technical Trainer   **2014 - 2022**
Apple Inc.

- Led onboarding academy classes for both technical and non-technical new-hire Apple employees.
- Specialized in delivering technical training courses for employees transitioning into technical roles within the company. An example of such tech would be instructing macOS courses, which often involved working closely with terminal and sudo commands.
- Implemented training content for technical modules to improve the classroom learning environment and improved final scores by 12.6%.
- Instructed courses on internal tools used globally within the company in both in-person and virtual environment settings.
- Gathered and provided log files to engineering support for issues requiring further analyzation.

INTERESTS

• Learning and recording new music with my band Groove Co.	• Perfecting my hobby of cocktail crafting for friends	• Exploring new countries, cultures and languages
• Camping, hiking and exploring the Colorado Rockies	• Completing my goal of traveling to all 50 states in order to cross them off my map	• Working out, outdoor runs and play time with my dog Luna
